

BMID III-B

Bluetooth Battery Monitor

BMID III-B is a fleet management tool designed to monitor, record, and report on the health of your batteries, in turn extending useful battery life and enhancing overall fleet productivity. BMID provides annual cost savings by minimizing the need for battery replacements.

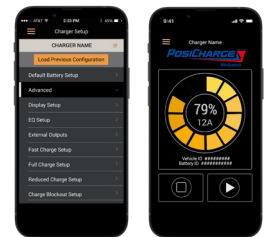

This advanced battery monitor is secured to the battery and communicates with your battery chargers, transforming your facility into a "smart fleet" operation. BMID III-B uses bluetooth technology to uniquely identify each battery, and stays with it for the rest of its life, continuously monitoring use, recommending rotation schedules, and advising users on estimated battery life expectancy.

The BMID III-B also enables you to lower annual costs by minimizing downtime and reducing battery replacements through features such as preventative maintenance scheduling and real-time alerts for issues that might affect battery performance. It can also help you better control ongoing battery costs by automatically tracking your fleet's battery warranty compliance, and reporting on any warranty deviations.

All battery health and charge data are directly downloadable from the battery when connected to the ProCore Edge charger, via the PosiCharge Mobile App, delivering actionable data without costly infrastructure.

Key Features:

- Bluetooth Communication to Edge Charger
- Extensive Reporting Capabilities
- Intuitive User Interface
- Key Alerts to Charger Display
- Program via Mobile App (thru Charger)
- Alternative wireless programming via PC & Dongle
- Event History via Mobile App (thru Charger)
- IP65 Enclosure - Designed to handle acid immersion and high pressure spray from battery washing
- Universal Battery Voltage (8-130VDC)
- Dimensions: 7.63" L x 2.25" W x 1.25" D
- Current measurement range +/- 1000 amps
